

## Claims

1. A product comprising a container having a body defined by a container wall made of a plastics material, at least part of the container wall comprising spaced  
5 apart inner and outer walls, a label being located on the outer surface of the outer wall, the body having an internal cavity containing a medicament content and being bounded at least in part by the inner wall.
2. A product according to claim 1, characterised in that the internal cavity is  
10 directly enclosed by parts of the outer wall and is in contact with the outer wall, but the label is applied to a part of the outer wall the inner surface of which is not in contact with the contents.
3. A product according to claim 1 or 2 characterised in that the outer wall of  
15 the container comprises a skirt portion attached to the inner wall, and having a skirt part spaced apart from the inner wall.
4. A product according to claim 3 characterised in that the skirt portion is an  
upper skirt surrounding an upper part of the inner wall.
- 20 5. A product according to claim 3 characterised in that the skirt portion is a lower skirt surrounding the lower part of the container body.
6. A product according to claim 4 or 5 characterised in that the upper or lower  
25 skirt depends from a part of the body wall which directly encloses the contents of the container so that the contents of the container are in direct contact with the inner surface of this part of the body wall, but are not in contact with the inner surface of the upper or lower skirt portion.
- 30 7. A product according to claim 1 or 2 characterised in that the container is a double walled container, having a base wall and side walls extending upwardly from

the base wall toward an upper mouth opening of the container, and the side walls are in the form of a double wall comprising spaced apart inner and outer walls.

8. A product according to claim 7 characterised in that the side walls are in the form of a continuous double wall extending the whole height of the internal cavity from the base wall to the mouth opening.

9. A product according to claim 7 or 8 characterised by comprising substantially cylindrical inner and outer walls, which are substantially concentric and coaxial.

10. A product according to claim 7, 8 or 9 characterised in that the base wall is a continuous base wall linking the inner and outer walls and closing the space between them.

11. A product according to any preceding claim characterised by lower and upper container parts which fit together with a seal which does not allow leakage or contamination of the contents, such lower and upper container parts comprising respective lower and upper inner and outer wall parts of the container which fit together when the upper and lower container parts are fitted together.

12. A product according to any preceding claim made of plastics material and having an inner wall thickness ca. 1 - 2 mm, and an outer wall thickness ca. 1 - 2.5 mm.

13. A product according to any one of the preceding claims characterised in that the medicament content is a fluid which incorporates a solvent vehicle.

14. A product according to claim 13 characterised in that the solvent vehicle is a pharmaceutically acceptable oily vehicle.

15. A product according to claim 14 characterised in that the oily vehicle is a monoglyceride, phospholipid, or a galactolipid.
16. A product according to claim 15 characterised in that the oily vehicle is selected from glycerol mono-oleate, glycerol monopalmitate and glycerol monostearate.
17. A product according to claim 14, 15 or 16 characterised by containing a long-chain diglyceride.
18. A product according to any one of claims 14 to 16 containing a fatty acid triglyceride.
19. A product according to claim 18 characterised in that the fatty acid triglyceride is caprylic / capric triglyceride (Tricaprylin).
20. A product according to any one of the preceding claims characterised in that the medicament content comprises calcium mupirocin, fractionated coconut oil, and glycerol mono-oleate.
21. A product according to any preceding claim being a nasal spray container provided with means to deliver its medicament content to the nasal area of a user.
22. A mould suitable for making a container for a product according to any one of the preceding claims.
23. A method of labelling a container characterised in that a container is provided having a body defined by a container wall made of a plastics material, at least part of the container wall comprising spaced apart inner and outer walls, the body having an internal cavity for containing a medicament formulation content and being bounded at least in part by the inner wall, and a label is applied to the outer surface of the outer wall.

24. A method of labelling a container wherein a container is provided having a body defined by a container wall made of a plastics material, at least part of the container wall comprising spaced apart inner and outer walls, the body having an internal cavity for containing a medicament content and being bounded at least in part by the inner wall, and a label is applied to the outer surface of the outer wall, for the purpose of reducing the likelihood of label material permeating through the container wall to contaminate the contents, or for the purpose of reducing the likelihood of contents permeating through the container wall to adversely affect the label.
